CO-OPERATION FOR CONSERVATION OF RURAL ROAD VERGES
J.M.Way (1974)
NERC ITE

1. CORNWALL

A. County Council Highways Department

In 1972 reported that it had no direct contact with the Nature Conservancy. That the Naturalists' Trust was very active and had a working relationship with the Department, who were sympathetic to the Trust's aims within the limits of their other responsibilities.

Sites of special importance had been scheduled and marked with posts. There was a general agreement not to mow within the markers.

B. Nature Conservancy

Reported in 1973 that direct contact had been established with the Highways Department on a particular matter and that it was intended to maintain this contact over other routine matters. The Assistant Regional Officer concerned was a member of the Naturalists' Trust committee concerned with liaison on highway interests.

C. Cornwall Naturalists' Trust

Reported in January 1974 that the Trust had a good relationship with the Highway Department, and that the Roadverge Sites Committee had had annual meetings with the Department since 1971 to discuss any points in the treatment or conservation of verges that might have arisen during the preceding year. Not all the 26 scheduled sites were marked with posts and it had not proved possible for the Trusts' Road Verge representative to visit all the sites.
